

Virtual Forge

The SAP Code Security Experts

May 2008

Our Mission

We enable our customers to build, run and maintain custom SAP applications that meet Security and Compliance requirements.

Our expertise covers the entire SAP development lifecycle. We analyze processes, guidelines and coding practices. Subsequently we help our customers in closing any identified gaps. As a result, our customers can build secure and compliant custom SAP code in a very cost efficient manner.

About us

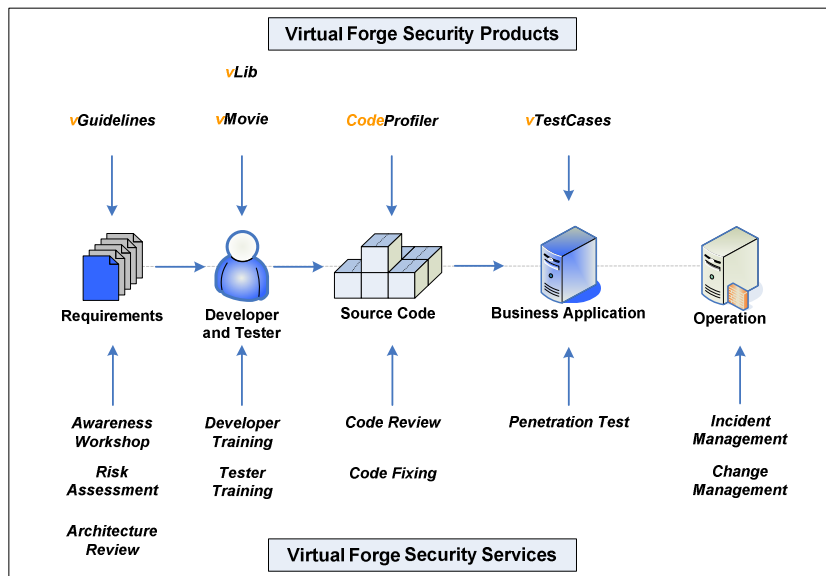

Virtual Forge GmbH was founded by Andreas Wiegenstein and Dr. Markus Schumacher. Prior to that, Andreas Wiegenstein worked as an independent security consultant at SAP for several years. Dr. Schumacher worked with SAP NetWeaver Product Management Security for two years and has a long background in security research.

Today, Virtual Forge is the leading authority in business application security. We are an early member of the SAP Global Security Alliance. Virtual Forge is an independent provider of risk assessment, risk mitigation, education and managed services to mid-size and Fortune 500 companies. Many SAP customers rely on our expertise to understand the security risks in their software systems and facilitate the software and process change necessary to mitigate them.

Our staffs are frequent speakers at conferences like SAP TechEd, DSAG (German SAP User Group) and Mastering SAP Technologies.

Services & Products

Our services and products cover every aspect of custom SAP development. Further details on our products and services are available at our Web site or upon request.

Selected customers

While SAP is still one of our biggest customers, we also work for corporations like Lufthansa, Siemens, PriceWaterhouseCoopers, China Light Power and Postbank Systems.
