

SECURITY INNOVATION AND VIRTUAL FORGE ANNOUNCE GLOBAL SAP APPLICATION SECURITY SERVICES PARTNERSHIP

WILMINGTON, Mass.—March 12, 2007— Security Innovation, the authority on application security and leading independent provider of risk assessment, risk mitigation and training services, and Virtual Forge, an expert SAP security services and products company based in Mannheim, Germany, today announced their partnership. This partnership will allow Virtual Forge and Security Innovation to provide complete and seamless application security services to companies utilizing a combination of SAP and other business applications. Each company brings to the partnership specific software security and development lifecycle expertise that combined provide a complete application security program for SAP customers.

Software is the critical infrastructure that enables modern business, and in order for companies to successfully compete in the business market, the security of their software is essential. Security Innovation is an expert in application security risk analysis and mitigation in Microsoft and J2EE environments, and has helped hundreds of companies, including numerous Fortune/Global 500 companies, uncover and repair security flaws in their applications. Virtual Forge is an expert in risk analysis and mitigation in SAP applications and technology platforms and over the years has provided high-quality security services to SAP customers as well as to SAP itself. Together Virtual Forge and Security Innovation will provide end-to-end application security solutions for SAP customers world wide.

“Ensuring application security is a huge undertaking in any organization, and is particularly difficult in those which deploy business-critical applications from multiple vendors,” said Ed Adams, CEO of Security Innovation. “SAP applications provide a strong backbone for business, and working with Virtual Forge, which has so much expertise in this area, will allow us to expand our services to secure the application environments of those companies that employ SAP applications.

“Working with a reliable, expert partner to manage application security is a boon for companies that don’t have expertise in that area, because the development of a secure application environment is critical to success for both the company and its customers,” said Markus Schumacher, CEO of Virtual Forge. “Partnering with Security Innovation allows us to offer world-class security services and support to our customers in the SAP application world.”

Virtual Forge and Security Innovation will begin collaborating on projects immediately in both the United States and Europe. Enquiries to each may be directed to their corporate offices.

About Security Innovation

Security Innovation, Inc. is an independent application security firm that offers education, risk assessment and risk mitigation solutions to Fortune/Global 500 and enterprise IT organizations. Leading companies such as Adobe, Cisco, Fidelity, IBM, ING, HP, Microsoft, VISA, SAP, Symantec, VeriSign and government agencies, rely on Security Innovation’s expertise to gain confidence in the security of applications they build and/or acquire, and facilitate the technology, process and management change necessary to mitigate security risk. The company is headquartered in Wilmington, Mass., with offices in Amsterdam, The Netherlands and Seattle, Wash.
